

SPCC Training for Utility Workers

In conjunction with USWAG's Tanks Subcommittee, Excal Visual LLP has developed a video employee training kit on Spill Prevention Control and Countermeasure (SPCC). This kit is aimed at generation, transmission and/or distribution operations regulated under CFR Title 40 Part 112. The kit includes a 23-minute training video entitled "*SPCC for Electric Utilities*" designed to show utility workers and contractors exactly what is expected of them in order to comply with the day-to-day requirements of the SPCC rule. While the program focuses on oil-filled electrical equipment, it also covers above-ground storage tanks and portable containers, so the program can be used to train workers at substations as well as service and repair facilities.

The kit is available on 15-day free preview to all EEI/USWAG members. The video can also be previewed online at www.excalvisual.com. For more information, please call Excal at 888-925-6554.
